MOODBEATS

Group Number : CS_124

Module Name - Software Development
Group Project Module Code - 5COSC021C
Module Leader - Banuka Athuraliya

UOW NO -w2052093
IIT NO-20220794
Student Name -Kahatuduwage Disandu Anuk Perera

Declaration Page

I Kahatuduwage Disandu Anuk Perera Hereby Declare That The Work Presented In This Project MOODBEATS : An Intelligent Music Generation And Interaction System Is My Original Work And Has Not Been Submitted For Any Degree Or Examination At Any Other University Or Institution. All Sources Of Information Have Been Duly Acknowledged.

Signature. Submission Date

Abstract

MOODBEATS Is An Innovative Application Designed To Integrate Music Generation, Facial Recognition And Voice Recognition Into A Unified System. By Leveraging Advanced Machine Learning Algorithms And User Friendly Interfaces, MOODBEATS Can Generate Personalized Music Experiences, Including Song Creation And Automated Cover Art Generation. This Project Ensures Ethical Compliance And User Privacy While Addressing Social And Professional Issues In AI Development.

Keywords

1. Music Generation
2. Facial Recognition
3. Voice Recognition
4. AI Ethics
5. Cover Art Generation
6. User Interaction

Acknowledgement

I Would Like To Express My Heartfelt Gratitude To My Supervisor Mr Banu Athruliya For His Invaluable Guidance And Support Throughout This Project. I Am Also Thankful To My Friends And Family For Their Encouragement And To Informatics Institute Of Technology For Providing The Resources Required For The Completion Of This Work.

Chapter 4: System Requirements Specification (SRS)

4.1 Chapter Overview

An Extensive Overview of the Emotion Based Music Player's System Requirements Specification (SRS) is given in this chapter. Because It Outlines the System's anticipated performance, features and operational needs. The SRS is an essential document in the software development life cycle. This chapter establishes the groundwork for the application's successful development and deployment by providing a comprehensive grasp of the technical components of the system as well as the needs of the stakeholders.

A thorough examination of the many stakeholders, their responsibilities and their experiences of the system is included in the SRS. It lists the main user categories, including fitness fanatics, emotional health advocates, and casual listeners and also explains how the system attempts to meet various demands. This chapter also outlines the technical prerequisites needed to enable the suggested features, like AI-generated music, emotion detection and smooth user interaction.

Our goal in writing this chapter is to provide a clear and practical roadmap for the project's technical and functional implementation. While addressing potential issues like real time emotion analysis, data privacy, and system scalability, It Guarantees that the design and development meets user expectations. As a result, this SRS chapter serves as a guide for all parties involved, facilitating a common comprehension of the objectives and limitations within the project.

4.2. Stakeholder Analysis

Stake Holder	Viewpoint	Functional Beneficiary	Financial Beneficiary	Social Beneficiary	Operational Beneficiary	Negative Stakeholders	Regulatory Stakeholders	Experts	Neighboring Systems
Core Stakeh									

olders									
Global Listeners	Desire A Seamless And Personalized Music Experience.	Yes	No	Yes	Yes	No	No	No	Music Streaming Services Like Spotify And Apple Music.
Young Adults And Teenagers	Want Trendy And Mood Based Music Recommendations.	Yes	No	Yes	Yes	No	No	No	Social Media Platforms For Music Sharing.
Emotional Health Advocates	Focus On Mental Wellness Resources And Mood Enhancement Through Music.	Yes	No	Yes	No	No	Yes	Mental Health Professionals.	Wearable Health Tracking Systems.
Fitness Enthusiasts	Prefer Fitness Oriented Playlists That Sync With	Yes	No	Yes	Yes	No	No	Fitness Trainers.	Wearable Devices Like (Fitbit Or Garmin).

	Workout Intensity.								
Music App Developers	Interested In Creating User Friendly Music And Wellness Features.	Yes	No	No	Yes	No	No	UI/Ux And Software Development Experts.	API Services For Music Content.
Key Stakeholders									
Investors And Sponsors	Expect A Profitable And Scalable Music App.	No	Yes	No	No	No	Yes	Financial Experts.	Market Trend Analysis Tools.
Regulators And Policy makers	Concerned With Data Privacy ,Copyright ComplianceAnd Fair Usage Policie	No	No	Yes	No	No	Yes	Legal Experts.	Digital Rights Management Systems.

	s.								
Supportive Stakeholders									
Content creators And Music Producers	Seeking Proper Licencing, Fair Revenue Sharing And Audience Engagement.	Yes	Yes	Yes	No	No	Yes	Music Producers And Sound Engineers.	Audio Editing And Production Tools.
Technology And AI Providers	Provide Tools For Mood Detection And Music Recommandation.	Yes	No	Yes	Yes	No	Yes	AI/ML And Data Analytics Experts.	Cloud Computing Platforms Like AWS And Google Cloud.
Community And Advocacy Groups	Promote The Inclusion Of Mental Health And Well Being Aspect In Music	No	No	Yes	No	No	Yes	Non-Profit Mental Health Organizations.	Collaborative Mental Health Initiatives.

	Apps.								
Mental Health Professionals	Advocating For Using Music As Therapy.	No	No	Yes	No	No	Yes	Psychologists And Psychiatrists.	Health Tech Applications For Therapy.

Table 1: Stakeholders Analysis

Analysis Summary

1. Core Stakeholders Are The Main Users And Contributors To The Applications Success.

2. Key Stakeholders Support The Project Through Funding, Regulations And Policies.

3. Supportive Stakeholders Enhance The Project With Their Technology Experience And Expertise.

4. The Analysis Also Identifies Neighboring Systems And Potential Challenges Posed By Negative Stakeholders Who May Conflict With The Goals Of The Application.

4.2.1.Onion Model

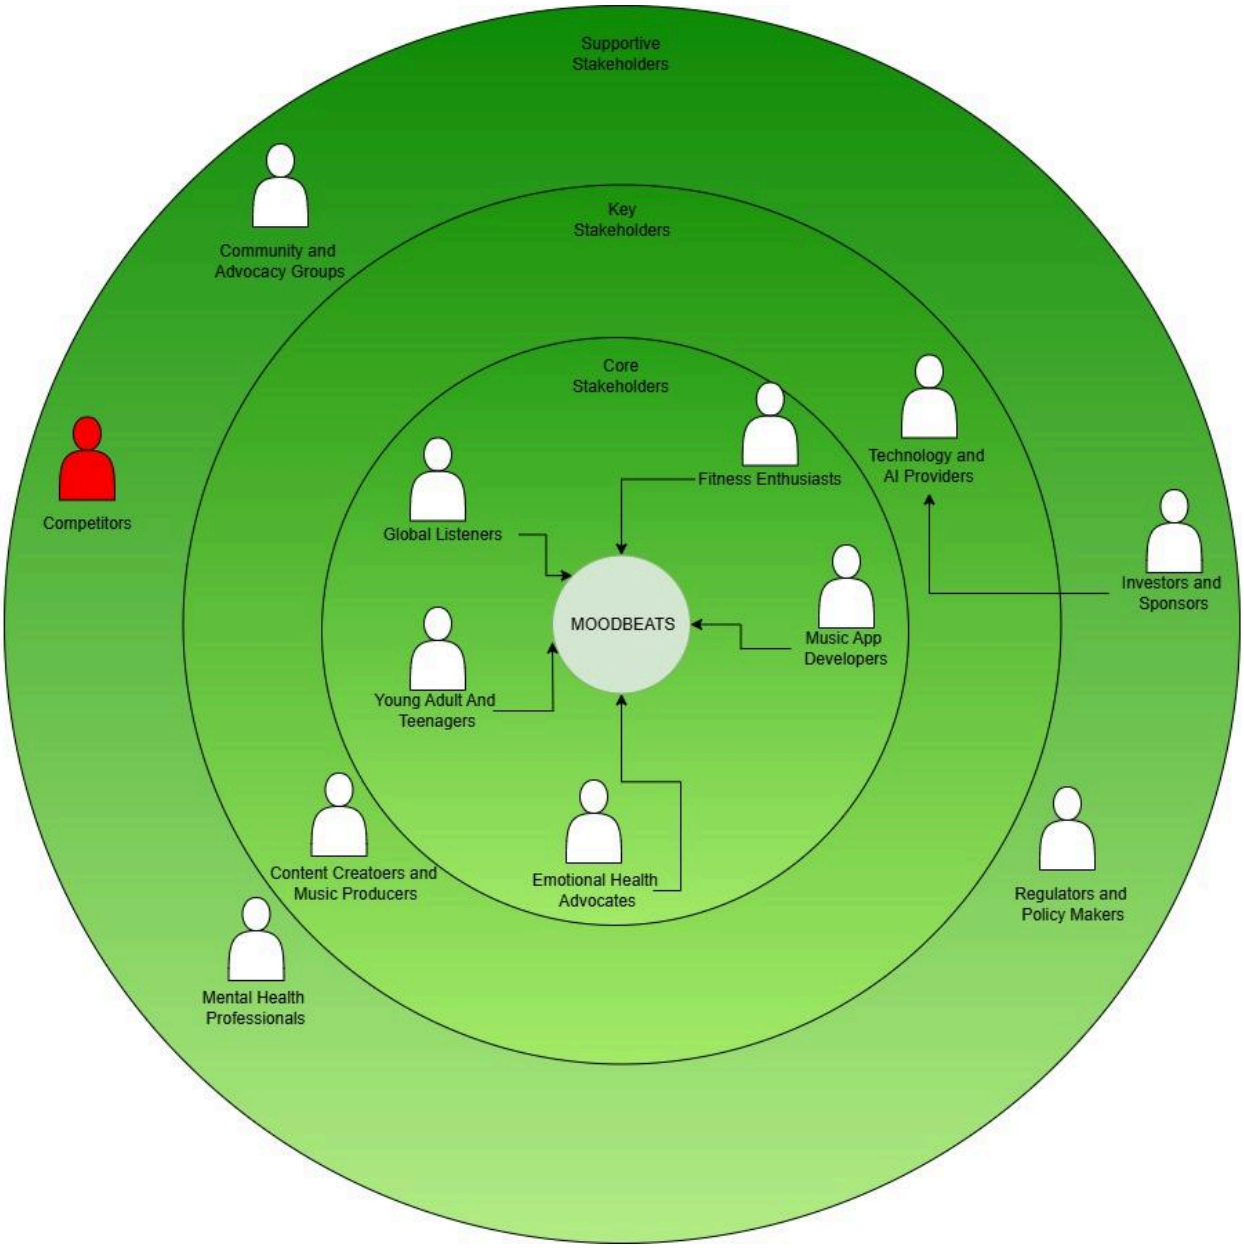

Figure 1 : Onion Model

4.2.2.Stakeholder Descriptions

Stakeholder	Viewpoint
Functional beneficiary	
● Global Listeners ● Young Adults And Teenagers ● Emotional Health Advocates ● Fitness Enthusiasts ● Music App Developers	● Who Benefits from the functionality of the music player MOODBEATS.
Financial beneficiary	
● Investors, Sponsors ● Content Creators Music Producers ● Technology And AI Providers	● Who Gains Financial Benefits From MOODBEATS.
Social beneficiary	
● Mental Health Professionals	● Who benefits from the social impact from MOODBEATS.

• Emotional Health Advocates • Community And Advocacy Groups • Regulators and Policy Makers	
Operational beneficiary	
• Technology And AI Providers • Music App Developers	• Who benefits from operational collaboration with MOODBEATS.
Negative Stakeholders	
• Competitor Platforms • Regulatory Bodies • Traditional Music Distribution Channels	• Who may oppose Or Maybe Adversely Affected By MOODBEATS.
Regulatory	
• Regulators And Policy Makers	• Who ensures compliance with standards and rules For MOODBEATS.
Experts	
• Mental Health Professionals • Technology And AI Providers	• Who Provides expert insights For MOODBEATS improvement.

• Content Creators Music Producers	
Neighboring systems	
• Streaming Platforms • AI Driven Recommendation Engines • Social Media Platforms For Music Production • Fitness Trackers Or Health Apps For Integrative Features	What external platforms or systems integrate with MOODBEATS.

Table 2: Stakeholders Descriptions

4.3. Selection of Requirement Elicitation Techniques/Methods

1. Interviews: Gather detailed insights from core stakeholders like Global Listeners and Health Advocates to understand specific needs, such as mental wellness feature expectations.

2. Surveys: Efficiently collect preferences and demographics from large groups,Like fitness enthusiasts and teenagers.

3. Focus Groups: Facilitate discussions with social beneficiaries like mental health professionals to explore the app's social impact.

4. Document Analysis: Review policies and standards to ensure regulatory compliance like GDPR Compliance.

5. Observation: Study User Interactions with existing apps to uncover unspoken behaviors and pain points.

4.4. Discussion/ Analysis of Results

1. Interviews: Prioritized wellness features and seamless AI integration.

2. Surveys: Focused On AI Personalization.

3. Focus Groups: Added Mood Based and inclusive recommendations.

4. Document Analysis: Ensured GDPR Compliance.

5. Observation: Introduced Ad Free tiers and a Simplified UI.

4.5. Use Case Diagram

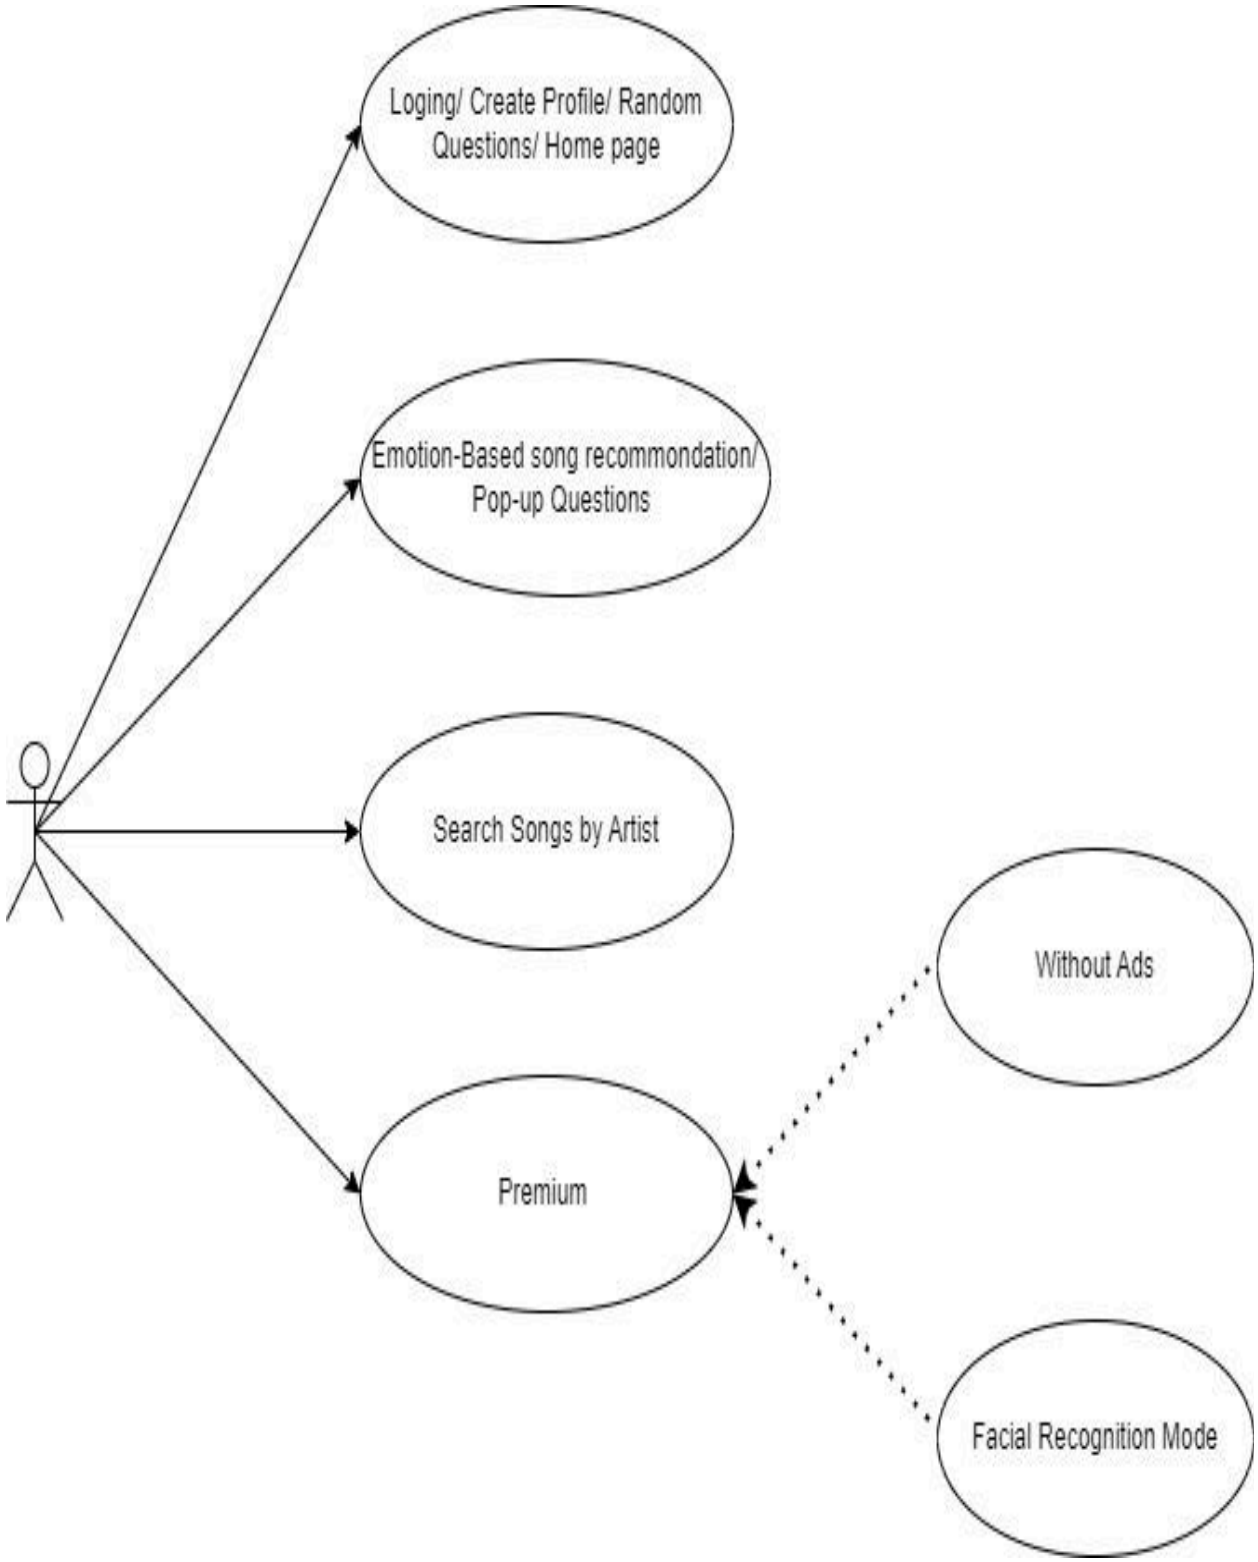

Figure 2 : Use Case Diagram

4.6. Use Case Descriptions

Use Case Name	Creating Personalized Playlists	
Use Case ID	UC-001	
Description	Allow Users To Create Customized Playlists Based On Their Preferences, Moods And Activities	
Priority	High	
Primary Actor	Global Listener	
Supporting Actors	Music App Developers	
Pre-Conditions	● The User Must Be Logged Into MOODBEATS ● The App Must Have Access To User Listening History And Preferences	
Trigger	The User Selects The Create Playlist Option	
Main flow	Actors	System
	User Provides Preferences eg: Genre,Mood Or Activity	● System Will Process Preferences And Generates Playlists Recommandations ● System Saves The Playlist Under The User's Account.
Exception flow	Actors	System
	User Provides Incomplete Or Invalid Preferences.	● Prompts The User To Fill In The Missing Information

		• Suggest Default Playlists If Preferences Are Unavailable.
Alternate flow	Actors	System
	User Skips Providing Preferences	• Generates A Generic Playlist Based On Trending Songs. • Allows The User To Refine It Later.
Exclusions	Offline Playlist Creation Is Not Supported.	
Post Conditions	Playlist Is Saved And Displayed In User's Library.	

Table 3: Use Case Descriptions

4.7. Functional Requirements (with prioritization)

Requirements list		**Priority Level**	**Description**
FR1	Personal Playlist Creation	High	The System Allows Users To Create Personalized Playlists Based On Genre, Mood Or Activity
FR2	Quality Of Music	High	Users Are Able To Stream Music Seamlessly.

Table 4: Functional Requirements

4.8. Non-Functional Requirements

Requirements list		Priority Level	Description
FR1	Minimal Battery Consumption	High	The App Should Be Optimized For Minimal Battery Consumption On Mobile Devices.
FR2	User Data Privacy And Protection	High	The Platform Must Comply With GDPR For User Data Privacy And Protection.
FR3	Data Storage	High	Data Storage Must Be Scalable And Secure To Accommodate Growing Users And Music Library Data.
FR4	Integration With 3rd Party Services.	High	The System Should Allow Seamless Integration With 3rd Party Services Such As Apple Music And Spotify
FR5	App Loading Time	High	The App Should Have A Response Time Of Less Than 2 Seconds For Key Actions Such As Loading Playlists Or Streaming Music.
FR6	App Responsiveness	High	The User Interface Must Be Responsive And Consistent On All Devices Including Mobile And Web.

FR7	App Updates	High	Updates And Patches Should Be Delivered To Users Without Disrupting Ongoing Activities.
FR8	User Handling	High	The System Must Handle Up To 1 Million Concurrent Users Before Performance Degradation.
FR9	Cross Platform Compatibility	High	The App Must Work In All Operating Systems Including Windows,Mac And Linux To Ensure The Application's Cross Platform Compatibility.

Table 5: Non Functional Requirements

4.9. Chapter Summary

This Chapter Outlined The Essential Requirements For Our MOODBEATS Application. The Functional Requirements Section Has Identified The Key Features And Their Priority Level, Such As Creation Of Personalized Playlists, Seamless Music Streaming And Fitness Integrations. The Non Functional Requirements Have Addressed Performance, Reliability, Security And User Experience Factors Critical To Ensuring A High Quality, Scalable And User Friendly Application.

Key Highlights **:**

1. Prioritization Of Functional Requirements Based Critically To Core Functionality.
2. Non Functional Requirements Emphasize Performance, Scalability, Security And Cross Platform Compatibility.
3. These Requirements Provide A Comprehensive Foundation For Designing, Developing And Deploying The MOODBEATS Application.

Chapter 5: Social, Legal, Ethical and Professional Issues

5.1. Chapter Overview

The Social, Legal , Ethical And Professional (SLEP) Concerns Surrounding The Creation And Implementation Of The MOODBEATS Application Are Examined In This Chapter. It Covers Issues Including Impartiality, Accessibility, Data Privacy, And Adherence To Professional Norms. This Chapter Also Describes How These Problems Were Found And Fixed Throughout The Course Of This Project.

5.2 Dataset Ethical Clearance

The MOODBEATS App Makes Use Of Datasets Including Information On Exercise Tracking, Mental Health Statistics And Music Preferences. Since These Datasets Came From Publically Accessible Sources, Their Permissions And Usage Guidelines Were Adhered To.

Dataset Sources:

1. Kaggle Music Preferences Dataset:
    - Citation: [Music Preferences Dataset – Kaggle]().
    - License: Open Database License - This Ensures The Dataset Can Be Used And Modified, Provided That Attribution Is Given By The Person Who Uses This Dataset.

2. Music Generation Dataset:
    - Source: Magenta Music Dataset.
    - License: Apache License 2.0 - Allows Reuse And Modification Given Proper Attribution
    - Usage: This Dataset Contains MIDI Files And Annotated Music Sequences, Enabling The Ability To Develop AI Models For Music Generation.
    - Ethical Clearance: This Dataset Is Open Sourced And Its Use For Non-Commercial Purposes Adheres To Licensing Terms.

3. Facial Recognition Dataset
    - Source: Facial Recognition Dataset - CelebA.
    - License: Non Commercial License Usage Is Restricted To Academic And Research Purposes.
    - Usage: Contains Over 200000 Images Of Celebrity Faces, Annotated With Facial Attributes To Train And Test Recognition Algorithms.
    - Ethical Clearance: Data Processing Is Anonymized And Images Are Solely Used For Research Purposes, Adhering To Ethical And Licensing Guidelines. Anyone Can Use This Dataset Due To Its Non Commercial License.

4. Voice Recognition Dataset
    - Source: LibriSpeech ASR Corpus.
    - License: Open Data Commons Public Domain Dedication And License (PDDL).
    - Usage: Provides Thousands Of Hours Of Transcribed Speech For Training And Testing Voice Recognition Models

- Ethical Clearance: The Dataset Is Public Domain, And It Uses Aligns With Legal And Ethical Standards. It Also Contains No Sensitive Or Identifiable Personal Information.

5. Image Generations For Covers
    - Source: Art Dataset from WikiArt.
    - License: Open Data For Non Commercial And Academic Usage.
    - Usage: Contains Over 81000 Artworks In Various Styles, Eras And Genres. This Dataset Can Be Used To Train AI Models That Generate Artistic Covers Based On Themes.
    - Ethical Clearance: Anyone Is Free To Use This Dataset As It Has A Non Commercial License And This Dataset Also Allows Contextual Generation.

Ethical Clearance Statement

- Ethical Standards Will Be Upheld By Using These Datasets In Line With The Conditions For Their Licenses. To Safeguard Personal Privacy And Prevent Any Unforeseen Harm, Sensitive Data Was Anonymized. Data Processing And Usage Were Examined For Compliance With Local And GDPR Laws.

5.3 SLEP Issues and Mitigation

Social Issues

1. Inclusivity:
    - Issue: The App Must Be Inclusive To Users From Different Demographics, Ensuring Access For Users With Disabilities.

- Mitigation: By Following WCAG(Web Content Accessibility Guidelines) By Implementing Features Such As Text To Speech, High Contrast Modes And Keyboard Navigation.

2. Digital Divide
    - Issue: Limited Access For Users In Regions With Poor Internet Connectivity Capabilities Or Having Low End Devices.
    - Mitigation:The App Will Be Optimized To Work Offline For Some Features And Designed To Work With Low Bandwidth Connections.

Legal Issues

1. Data Privacy And Security:
    - Issue:The App Process User Data, Such As Listening Preferences, Emotional Health Patterns And User Details. This Makes Compliance With Privacy Laws Essential.
    - Mitigation: Implementing Data Encryption, Anonymization Of Sensitive Information And Following Strict Compliance With GDPR And CCPA To Ensure User Data Protection.

2. Copyright Compliance:
    - Issue: To Ensure That All Music Tracks And Content Complies With Copyright Laws.
    - Mitigation: Partnering With Licensed Music Providers, Ensuring Proper Licensing Agreements Are In Place.

Ethical Issues

1. Bias In Recommandations:
    - Issue: Algorithms May Unintentionally Reinforce Biases, This In Turn Will Limit User Exposure To Diverse Music.
    - Mitigation: Implementing Fairness Checks In The Recommendation Engine. Ensuring Diversity In Music Recommendations.

2. Mental Health Concerns:
    - Issue: Emotional Health Tracking Could Lead To Cause Inadvertent Harm To The User If The Results Are Misinterpreted.
    - Mitigation: Can Collaborate With Mental Health Professionals To Provide Accurate Insights And Disclaimers And Promotes The User To Seek Professional Help When Needed.

Professional Issues

1. Adherence To Professional Standards:
    - Issue: The MOODBEATS Application Must Meet Professional Standards When It Comes To Quality And Reliability.
    - Mitigation: Following Agile Methodology And Conducting Regular Peer Reviews To Ensure Code Quality And Professional Integrity.

2. Transparency:
    - Issue: The Users Of MOODBEATS Must Understand How Their Data Is Used.
    - Mitigation: Developing A Clear And Concise Privacy Policy, Outlining The User's Data Usage And Offering Users The Chance To Avoid Unnecessary Data Preprocessing.

5.4 Chapter Summary

The Different Social, Legal, Ethical And Professional Factors That Were Taken Into Account While Creating The Museplayer Application Were Highlighted In This Chapter. It Discussed The Issues And Their Mitigation Methods And Approaches Used To Deal With These Issues, Making Sure That Following Applicable Laws, Inclusion Guidelines And Morally Righteous Norms. This Project Will Ensure User's Trust, Equity And A Beneficial Social Impact By Proactively Solving These Problems.

Chapter 6: System Architecture & Design

6.1. Chapter Overview

The Architectural And Design Elements Of The MOODBEATS Application Are Described In This Chapter. It Offers A Through Explanation Of The Main Components, Interactions And Design Patterns Of The System. This Chapter's Goal Is To Guarantee That The Technical Underpinnings Of The System Are Understood Well, Acting As A Roadmap For Its Advancement And For Future Enhancements.

This Chapter Includes The System Architecture Diagram, Design Decisions And A Breakdown Of Each Component, Emphasizing Scalability, Maintainability And User Centered Functionality.

6.4. Chapter Summary

This Chapter Outlines The Architectural And Design Foundations Of MOODBEATS Application, Focusing On Scalability, Maintainability And User Centric Functionality. It Describes The Integration Of Emotion Detection, Music APIs And Data Storage To Deliver A Personalized Music Experience.

Key Diagrams Also Include:

- Class/DFD: Shows Data Relationship And Flow.
- Sequence Diagram: Illustrates Interactions For Real Time Playlists For MOODBEATS.
- UI Design: Presents Our Intuitive, Responsive High Fidelity Prototype.
- Activity Diagram: Maps User Journeys For A Smooth Experience.
